

AcariaHealth Supplied Biopharmaceutical Program

IlliniCare Health works with AcariaHealth Pharmacy to provide biopharmaceuticals and injectables through the Biopharmaceutical Pharmacy Program. As mentioned in the Biopharmaceutical Pharmacy Program most biopharmaceutical and injectables billed for more than \$250 require a prior authorization (PA) to be approved for payment by IlliniCare Health. The PA requirements for the AcariaHealth supplied products are programmed specific to the drug and indicated in the table below. Since the list of drugs requiring PA changes over time, due to new drug arrivals and other market conditions, the \$250 amount is used as a reference gauge to help in determining whether to apply for PA.

A variety of biopharmaceuticals and injectables can be supplied by AcariaHealth using the following guidelines.

- 1.** Use the AcariaHealth enrollment forms located on the IlliniCare Health website.
- 2.** Call AcariaHealth at 1-855-535-1815 or fax AcariaHealth the enrollment form to 1-855-217-0926 for PA. Physicians can request that AcariaHealth deliver the biopharmaceutical product or specialty injectable to their office or to the member's home.
- 3.** If approved, AcariaHealth will contact the physician or member for delivery confirmation.

While the IlliniCare Health Medical Director and IlliniCare Health Director of Pharmacy Services oversee the clinical review, AcariaHealth is responsible for administering the PA process.

If a provider wishes to use office stock or if a drug is not listed on the product list below, they can fax requests to the IlliniCare Health Pharmacy Department at 1-877-851-3988.
